

FGFR1–Erdafitinib docking validation

A Multimodal-to-structure validation

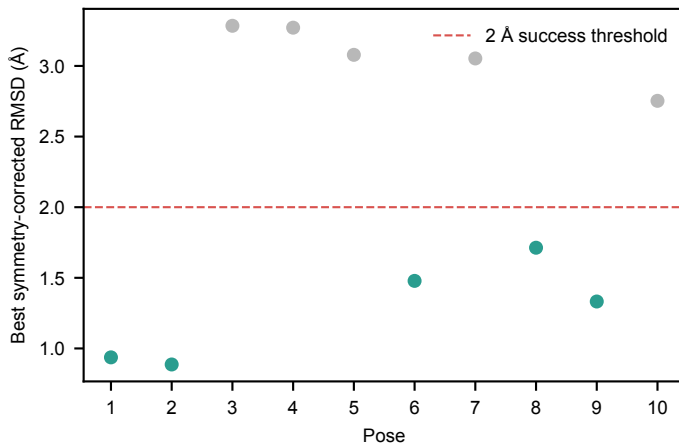

Candidate: Erdafitinib / FGFR1 | Search box: $24 \times 24 \times 24 \text{ \AA}^3$

B Docking score distribution

C Redocking validation against crystal pose

D Reproducible result and interpretation

Receptor: FGFR1 kinase, chain A (PDB 5EW8)

Ligand: Erdafitinib (PubChem CID 67462786)

Engine: AutoDock Vina 1.2.7; seed 20261004

Exhaustiveness: 32; poses: 20

Best affinity: -9.147 kcal/mol (pose 1)

Lowest crystal RMSD: 0.886 Å (pose 2; -9.122 kcal/mol)

Interpretation: docking supports a plausible FGFR1 binding pose.

It is not binding free energy and does not establish efficacy.

Next: pose inspection → MD stability → wet-lab validation.
